### Background

- Orgasmic dysfunction and changes in orgasm in men after robotassisted radical prostatectomy (RARP) are recognized complaints.
- Patients uniformly list orgasmic dysfunction as a significant detractor for their and their partners' sexual satisfaction and quality of life.

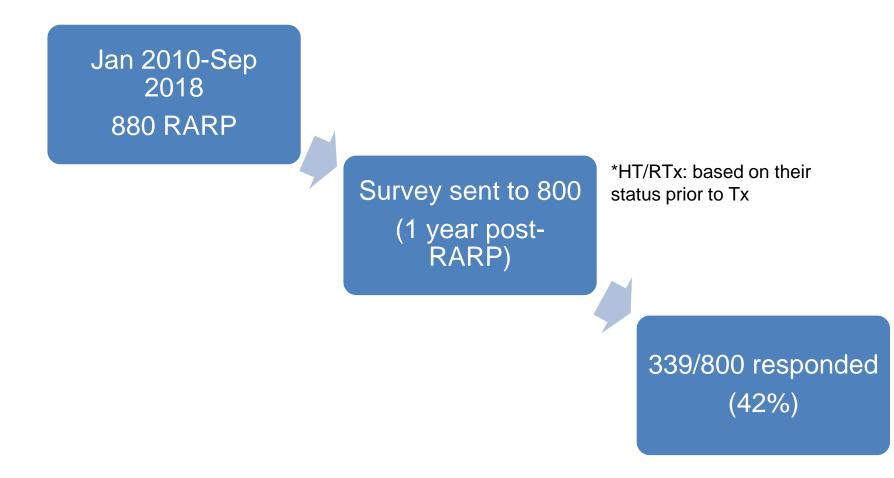

Aim of the study

The present study seeks to describe the nature and type of orgasmic dysfunction following RARP.

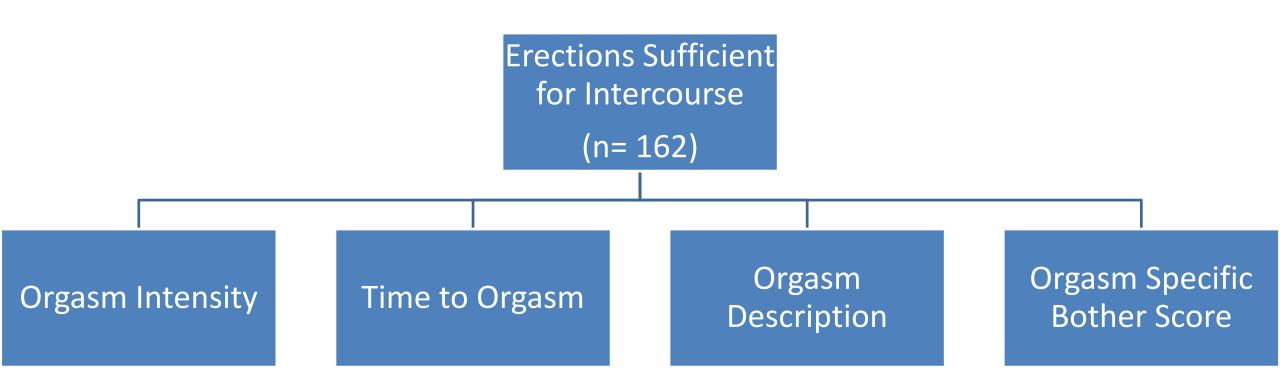

#### Methods

Figure 1: Patient Population

### **Orgasm Related Questions**

#### Results

Table 1: Demographics of men with erections sufficient for intercourse

N= 162	Mean	SD
Age	59.0	6.8
BMI	26.6	3.1
Pre-op PSA	6.5	5.9
Pre-op AUA	7.4	6.7
Bother	1.3	1.3
Pre-op IIEF-5	23.3	2.4
Total Testosterone	358.5	136.1
Free Testosterone	6.1	1.9
Prostate weight	49.1	16.8
	Ν	%
Bilateral NS	149	97.4%
Pathologic Stage		
pT2	123	80.4%
pT3/pT4	30	19.6%
Gleason Grade Group		
1	45	29.6%
2	56	36.8%
3	38	24.8%
4	8	5.3%
5	5	3.3%

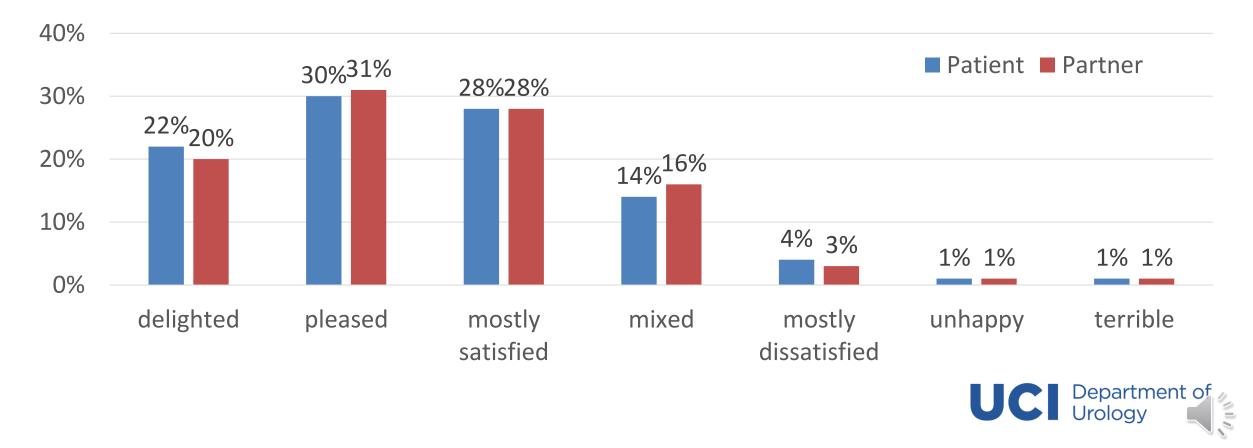

### Results: Patients' reported orgasm experience

Orgasm Intensity (N= 162)	%	Time to orgasm (N= 162)	%	Orgasm Description (N= 162)	%
Less intense	38%	Shorter	15%	Discomfort	12%
Same	49%	Same	50%	Less enjoyable	23%
More intense	12%	Longer	33%	Same	56%
No orgasm	2%	No orgasm	2%	More enjoyable	11%

# Results: Patient & partner orgasm related quality of life

If you were to spend the rest of your life with orgasms the way they are now, how would you/your partner feel?

- The present study represents one of the largest cohorts in the literature specifically describing orgasmic functional changes following RARP.
- Majority (80%) of potent patients and their partners are satisfied with their quality of orgasms after RARP.
